From a single instrument to multiple labs to departmental organizations, Agilent has a compliance solution that's right for your validation needs.

Minimize the costs of regulatory compliance.

Balancing the needs of your business with the needs of regulatory compliance can be both difficult and costly. Even keeping all compliance responsibilities inside your organization won't – by itself – significantly lower your compliance costs. That's because over 50% of the expenses are hidden in protocol administration, approval and upkeeping costs.

Real savings begin when you streamline and automate your compliance procedures, and that is where Agilent can help with a comprehensive portfolio of qualification services. Agilent's compliance solution is designed to significantly cut staff-time costs while it minimizes risk. This allows you to increase productivity and improve your bottom line.

Agilent's compliance services can help you:

- Reduce time-to-market and inventory costs
- Reduce the cost of downtime
- Reduce regulatory comments to zero

Optimize and automate to streamline your compliance procedures.

Whether your lab has instruments from Agilent or several manufacturers, Agilent provides a solution to optimize your compliance procedures. Our automated solutions provide both consistency and improved accuracy so qualification is simplified and risk is minimized. Our ability to optimize procedures using risk-based protocols results in a harmonized solution designed to meet your requirements.

“Agilent provides the most complete range of compliance and validation services in the world. It offers global, multi-vendor, multi-product packages that let you make one call for virtually all your compliance needs.”

Dr. Ludwig Huber
Internationally respected compliance and validation expert and Agilent Technologies Compliance Fellow

Efficient risk-based qualifications following the FDA's 21st Century initiative.

It is a certainty that regulatory requirements change and change again. Choose Agilent for compliance and you will benefit from a program that grows and evolves to meet your changing needs. In addition, all the services in Agilent's Compliance Portfolio are flexible enough to support your own validation procedures to allow you to decide whether your staff or Agilent, delivers and manages your solution.

Choose from Agilent's Compliance Services Portfolio to get the solution that's perfectly suited to your needs.

From a single instrument to multiple labs to departmental organizations, Agilent has a compliance solution designed to meet your needs. Whichever solution you choose, you can count on proven results from the company with over 100,000 successful deliveries, industry-leading quality development processes, and over a decade of practical compliance experience.

Whether you choose the Classic Edition, Operational Qualification (OQ/PV) for your Agilent instrumentation, or the new Enterprise Edition for other manufacturer's instruments, you'll benefit from compliance services developed following a rigorous lifecycle process. Agilent Compliance Services utilize commercial off-the-shelf (COTS) software, simplifying your overall validation efforts.

Classic Edition	The proven, safe and most convenient choice for Agilent equipment qualification. The OQ/PV ensures the basic accuracy and precision of your equipment and verifies that it meets specific criteria.
Software Edition	Fast, accurate and comprehensive qualification for Agilent software. Designed specifically to validate that Agilent software is installed, configured and operating properly.
Network Edition	Metrology-based qualification of your lab network infrastructure. Patent-pending methodology provides the services you need to complement system implementation and infrastructure validation.
Enterprise Edition	The most cost-effective and flexible qualification program for your entire laboratory and enterprise. Built on the patent-pending Agilent Compliance Engine, a fully automated software program, it's compatible with all of your instruments, including those made by Waters, Thermo, Shimadzu, PerkinElmer or Gilson.
Partner Edition	Enterprise Edition managed by you. Coming soon, the ability to deliver licensed qualification protocols when and where you want using your in-house staff.

Your enterprise,
Your laboratory,
Your individual needs.

Agilent's comprehensive Compliance Services Portfolio has the right solution for you.

Why compromise with protocols that don't have the flexibility to reflect your requirements and meet your changing needs, waste time adjusting to the different reporting structures and schedules of varying instrument brands, or leave your lab open to auditing risks? Agilent Technologies lets you increase your labs productivity by delivering a single source of proven and cost-effective qualification services that are broad enough to provide the seamless coverage necessary to minimize risk and flexible enough to meet the most demanding needs, enabling you to increase your lab's productivity.

Agilent ranked No. 1 in compliance!

An independent 2004 *LCGC* magazine survey of labs across Europe and North America ranked us **No. 1**. Agilent is the preferred choice in general compliance services, hardware and method validation, and system suitability.
